

# OMNIKLEEN HD

## Product description :

Highly concentrated, alkaline cleaner for industrial purposes. It is excellent for removal of mineral oils, greases and other industrial contaminations. By breaking down the surface tension, contaminations are quickly and effectively loosened from the surface, after which they are easily flushed with water. The product does not cause stable emulsions, it separates quickly and will not cause disturbance in the oil/water separator. May be applied with all types of equipment. The biodegradability of the surface active agents used in this product satisfies the Detergents Regulation (EC 648 / 2004).

## Instructions for use :

When using the product the first time, it is recommended to do some tests on a less visible spot. Dilution ratios depend on type and amount of contamination, equipment used, as well as water temperature and pressure. The product may be diluted up to max. 1 : 20 with water. Apply to the object to be cleaned, allow to work for some time (do not let dry !), then flush with plenty of water.

## Technical data :

Colour	colourless
Form	liquid
Minimum processing temperature	+5°C
Maximum processing temperature	+100°C
Flashpoint PMCC in °C	not applicable
Concentration analysis	not applicable
Specific storage requirements
